

Would You Like to Develop a Project?

Fundy Model Forest is embarked on a new exciting and challenging new phase in our growth as an organization. Throughout the province, communities that depend on the forest for their well-being are struggling to find new ways to use the resource to survive economically and provide a future for their young people. Our partnership is committed to helping these communities find a path to social and economic vibrancy.

We are moving forward from advancing forest management to advancing the health of communities that depend on the resource. We are in the process of developing projects. If you have a proposal you would like to submit or are interested in participating in a working group, please contact General Manager Nairn Hay: Nairn@fundymodelforest.net or 506-432-7563

Projects and initiatives will focus on achieving the following five objectives.

1. Community Capacity

To develop tools that can be used by communities to analyze their current status, identify opportunities, and help adapt to the dynamic nature of today's forest industry.

2. Science and Innovation

To continue to work in partnerships using science-based methodologies to develop innovative approaches to sustainable resource management in the Acadian Forest based on sound, documented research.

3. Bio-economy Diversification

To work with stakeholders to diversify the bio-economy through exploration of technologies that improve efficiency or create new products for the future

4. International Relationships

To work with stakeholders to facilitate relationships with international organizations leading to transfer of expertise, technology and knowledge.

5. Communication

To communicate the methods and innovations of the program to local, regional, national and international audiences.

During the fall, Fundy Model Forest prepared a strategic plan to guide our work until 2012. A copy of this document can be downloaded from our website or is available by contacting info@fundymodelforest.net .
